

WHAT IS CLAIMED IS:

1. A shell laminated structure comprising at least two layers of reinforcing base material and the layers being laminated, and each of the layers being integrally molded by synthetic resin and wherein characteristics of each of the layers are combined to each other so as to realize a function required for the shell;

wherein a net-like member constituted by either linear or fibrous raw material having less extension or shrinkage is placed between the laminated layers at either an entire region or a part of the shell in such a manner as one in which its front and rear surfaces are extended along their opposing layers, bitten into the layers and fixed there.

2. A shell laminated structure comprising at least two layers of reinforcing base material and the layers being laminated, and each of the layers being integrally molded by synthetic resin and wherein characteristics of each of the layers are combined to each other so as to realize a function required for the shell;

wherein a sheet-like member constituted by opening many holes in either cloth-like or film-like sheet material having less extension or shrinkage is placed between the laminated layers at either an entire region or a part of the shell in such a manner as one in which its front and rear surfaces are extended along their opposing layers, bitten into the layers and fixed there.
